

MDK Arm

MDK Arm

1. MDK-ARM installation
 - ARM Compiler 5 (AC 5)
 - Install AC 5
 - Add AC 5
 - Verify AC 5
 - Install the MSPM0G chip package
2. SysConfig installation
3. Configure SysConfig for KEIL 5
 - syscfg.bat
 - MSPM0_SDK_syscfg_menu_import.cfg
 - KEIL 5 Add SysConfig tool
 - Use SysConfig tool

MDK Arm (Microcontroller Development Kit for ARM): An integrated development environment (IDE) for microcontroller applications based on Cortex™-M, Cortex-R4, ARM7™ and ARM9™ processors.

The installation package path and the software installation path should not contain Chinese characters. Please install the installation package in a full English path

1. MDK-ARM installation

To build the TI development environment, you need to use Keil MDK-Arm uVision v5.38a or higher!

Since MDK-ARM is a paid software, the tutorial only covers the MDK-ARM installation process

Open `MDK_541.exe` as an administrator and install according to the prompts:

Agree to the agreement

Installation location

The recommended default location for the software:

Setup MDK-ARM V5.41

Folder Selection

Select the folder where SETUP will install files.

arm KEIL

Press 'Next' to install MDK-ARM to these folders. Press 'Browse' to select different folders for installation.

Destination Folders:

Core: C:\Users\W_ML\AppData\Local\Keil_v5 Browse ...

Pack: C:\Users\W_ML\AppData\Local\Arm\Packs Browse ...

— Keil MDK-ARM Setup —

User Information

You can fill in as you like:

Setup MDK-ARM V5.41

Customer Information

Please enter your information.

arm KEIL

Please enter your name, the name of the company for whom you work and your E-mail address.

First Name: 01

Last Name: 01

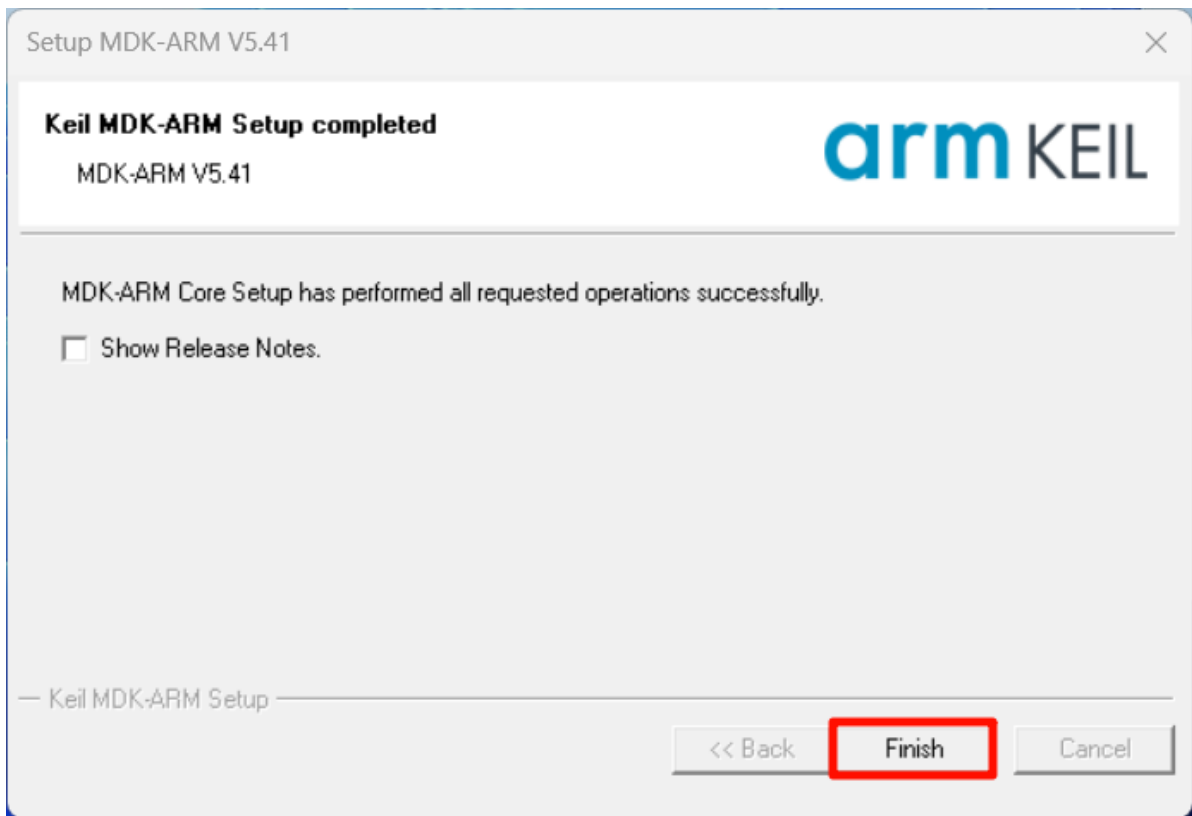

Company Name: 01

E-mail: 01

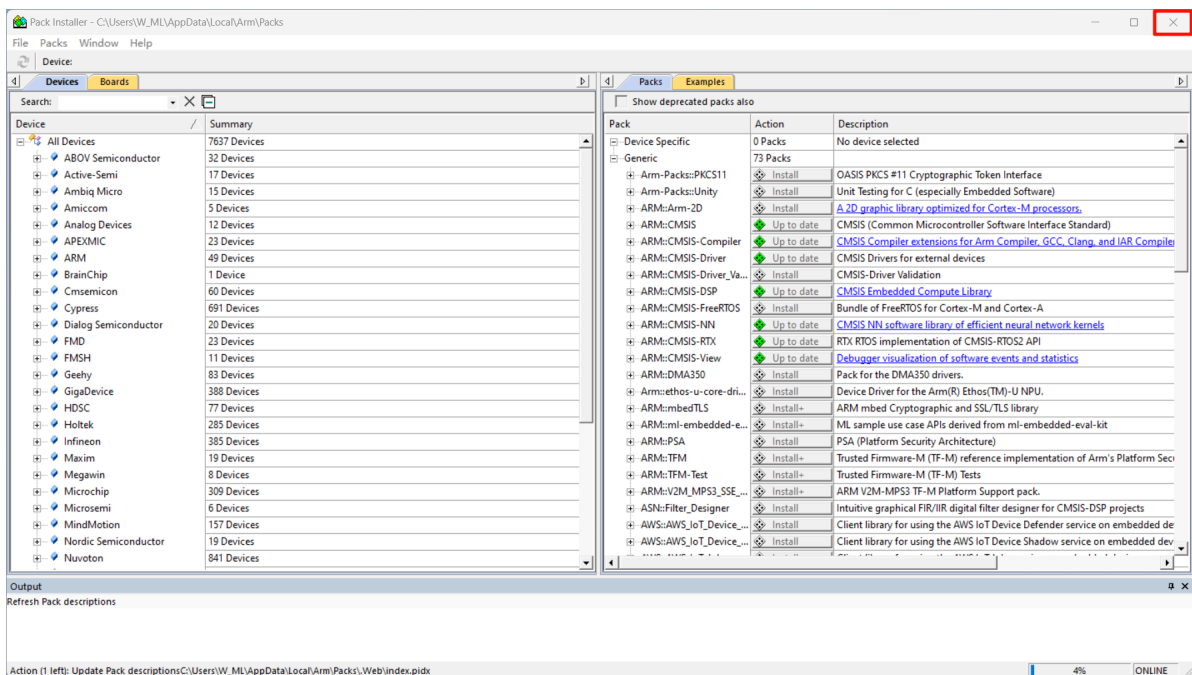

— Keil MDK-ARM Setup —

<< Back Next >> Cancel

If the driver installation pops up during the installation process, select Install All:

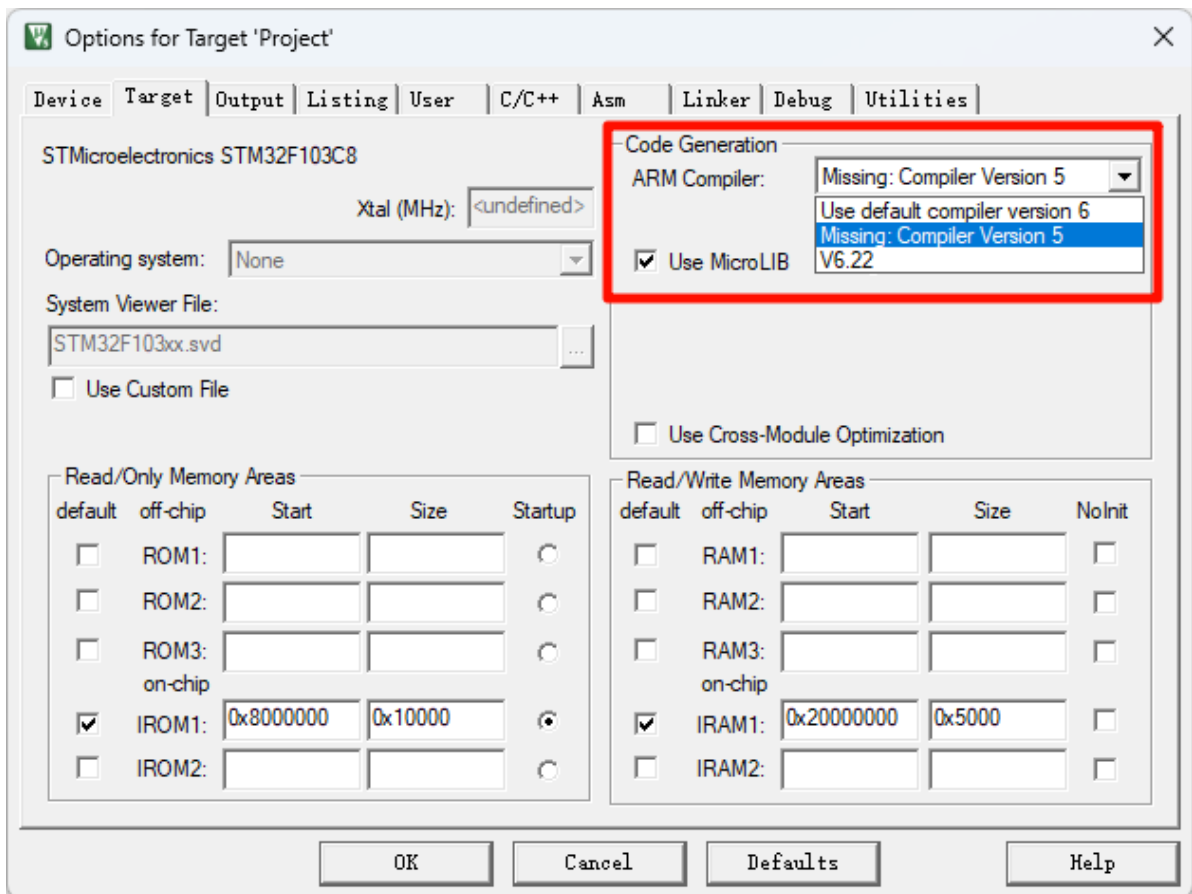

You need to close the software package/component interface for the first time: This interface can install chip packages, but it requires a network connection!

ARM Compiler 5 (AC 5)

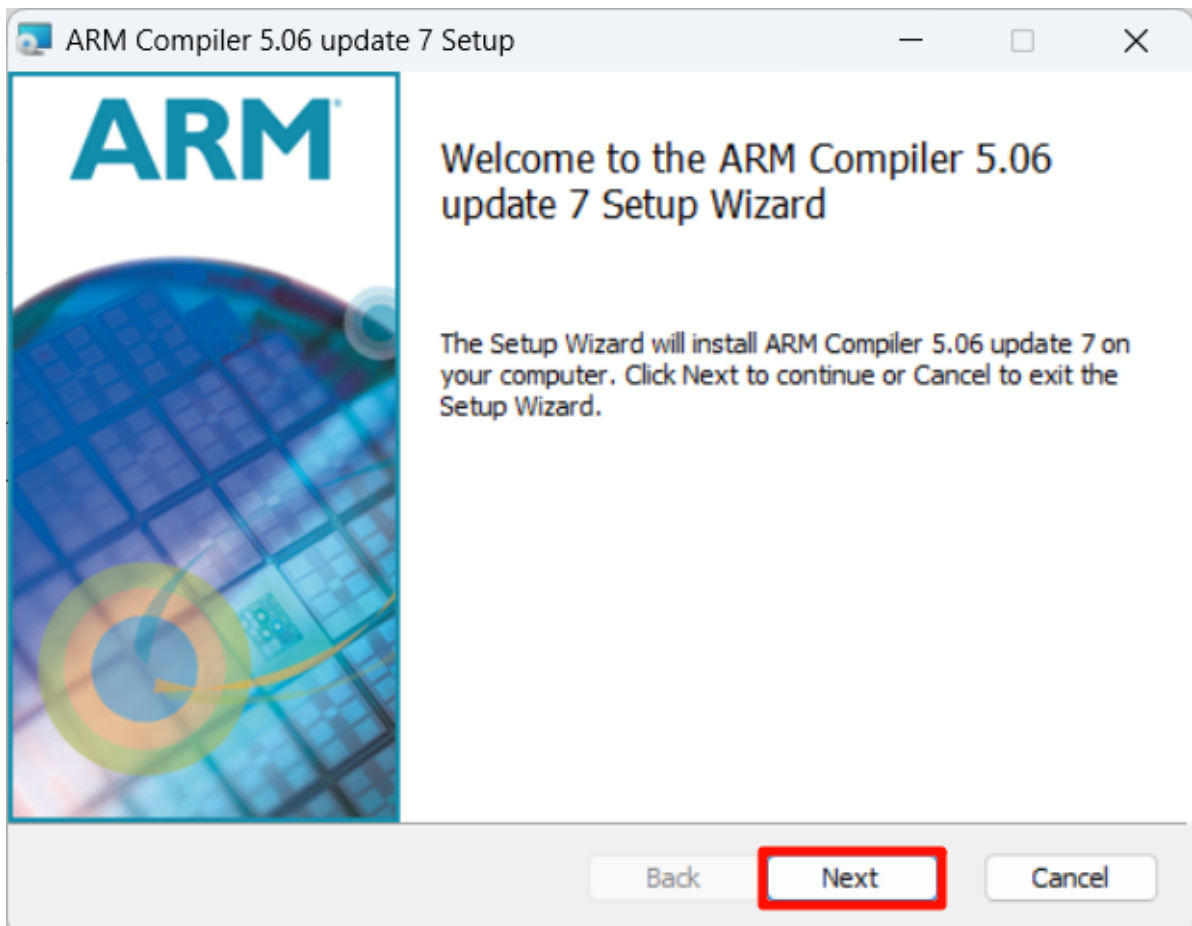

Starting from MDK5.37, the AC5 compiler is no longer installed by default and needs to be installed independently!

To compile with the old version of the project source code, you need to use AC5 to compile. To install the AC5 compiler, you need to open the project first.

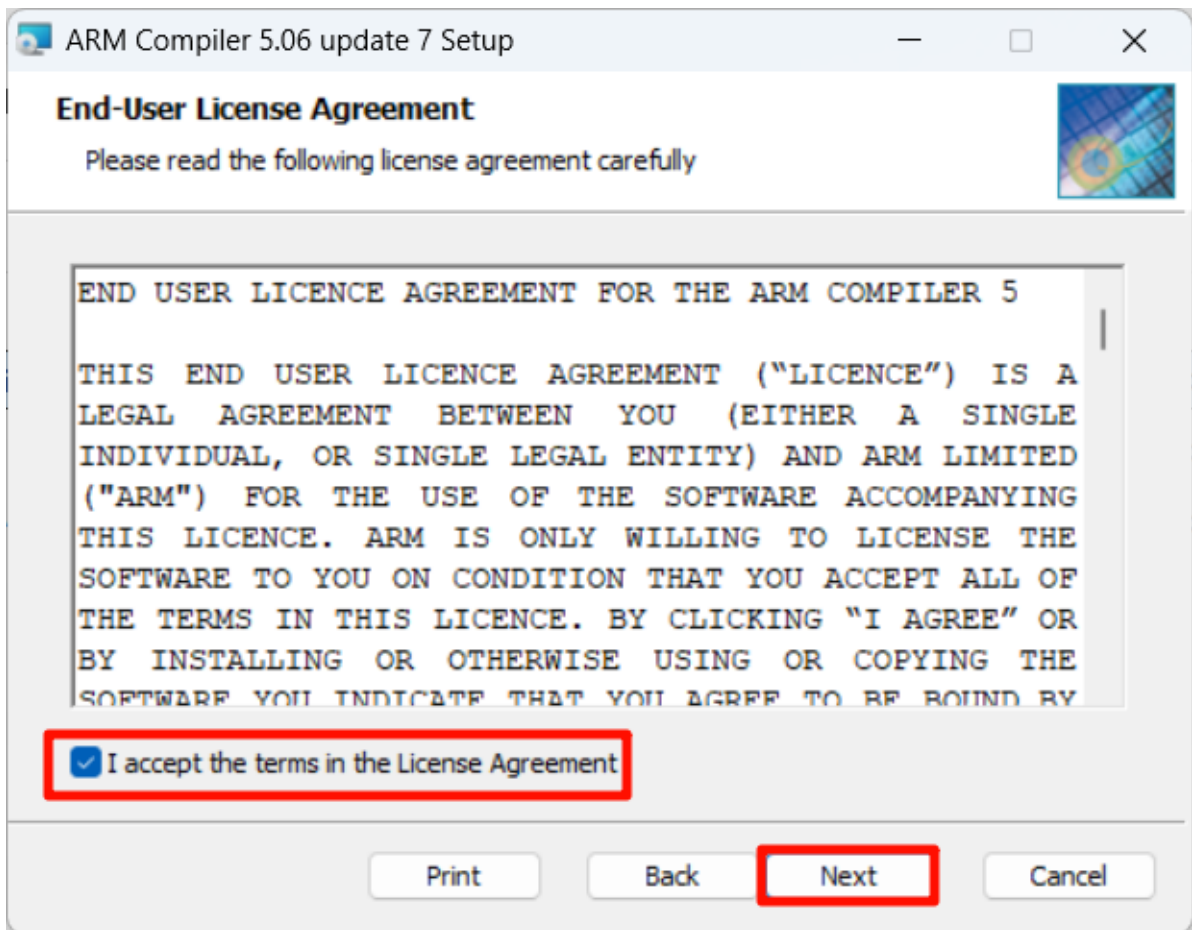

Install AC 5

Open `setup.exe` under `ARMCompiler_5.zip` as an administrator and install according to the prompts:

Agree to the agreement

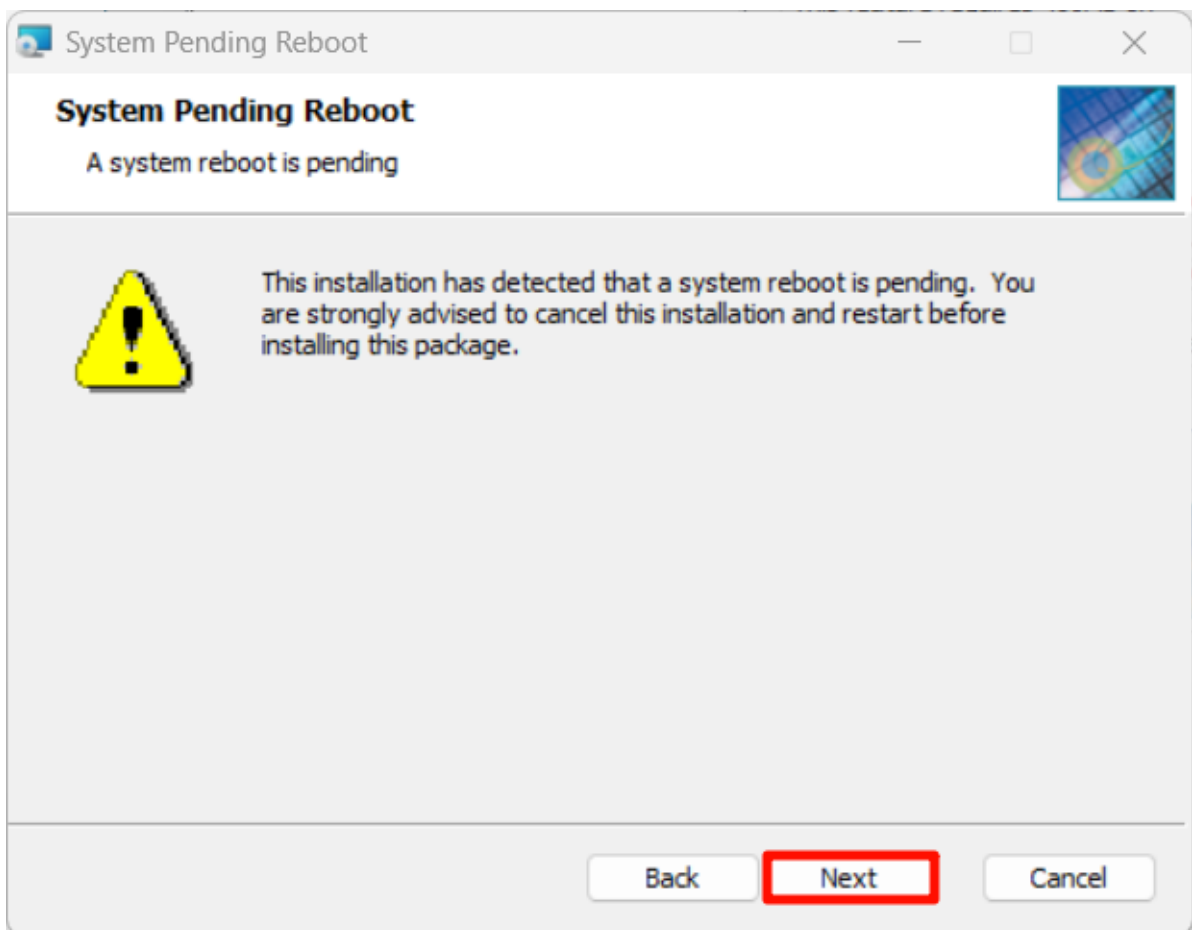

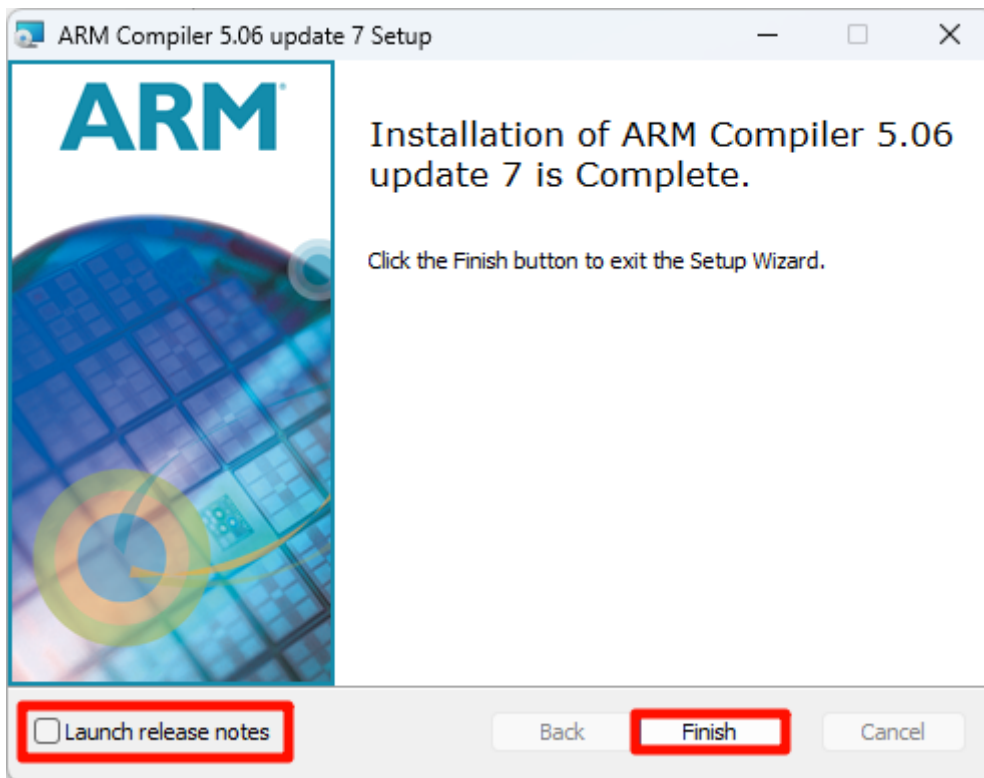

Installation location

Modify the installation location: Create a new ARMCC folder in the C:\Users\W_ML\AppData\Local\Keil_v5\ARM folder, and select this folder as the installation location of AC5

You need to create a new ARMCC folder according to your own MDK-ARM installation location

 image-20241030165327510

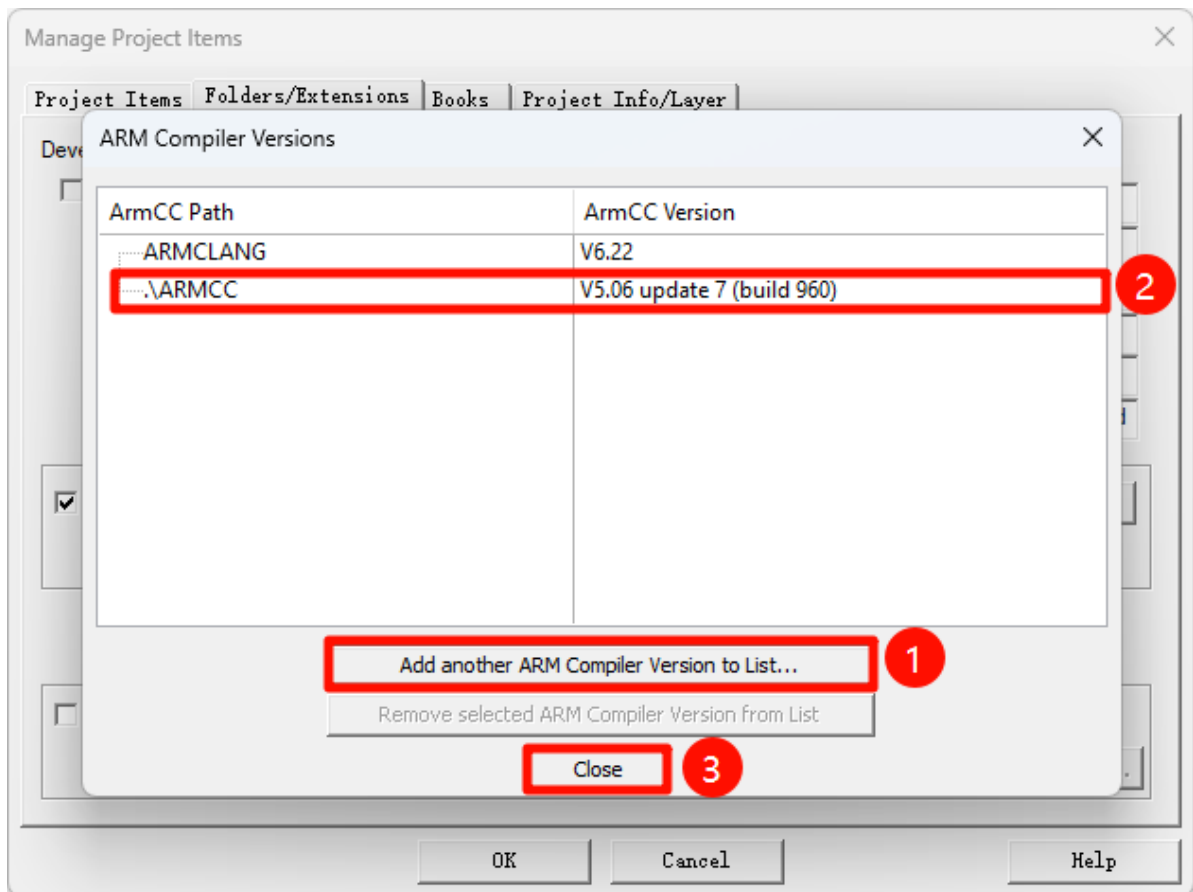

Add AC 5

The following operations involve MDK-ARM software, and you need to open a project; otherwise, the relevant menu options cannot be selected.

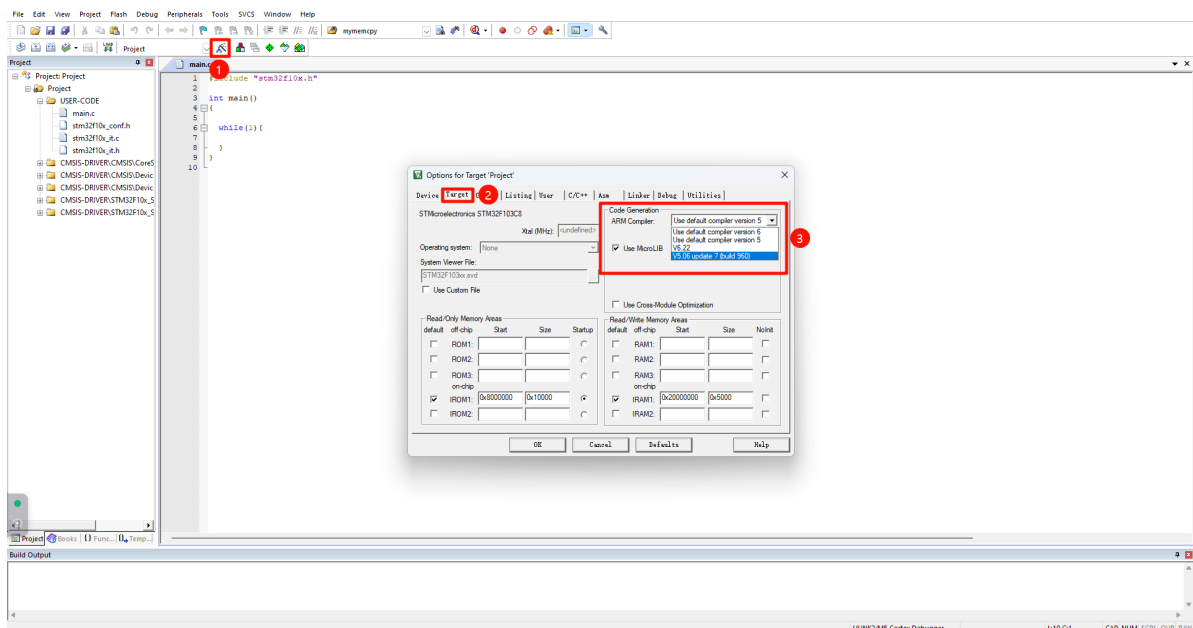

Add compiler: Select C:\Users\W_ML\AppData\Local\Keil_v5\ARM\ARMCC folder

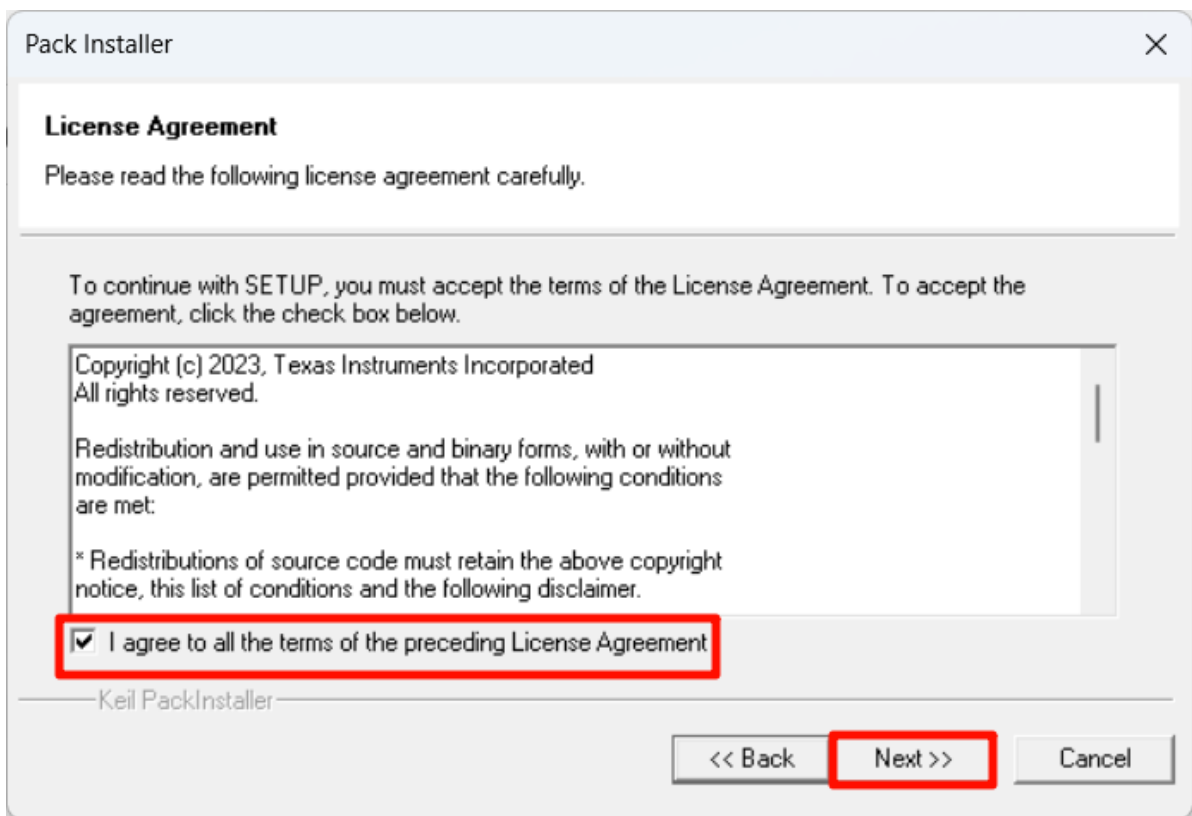

Verify AC 5

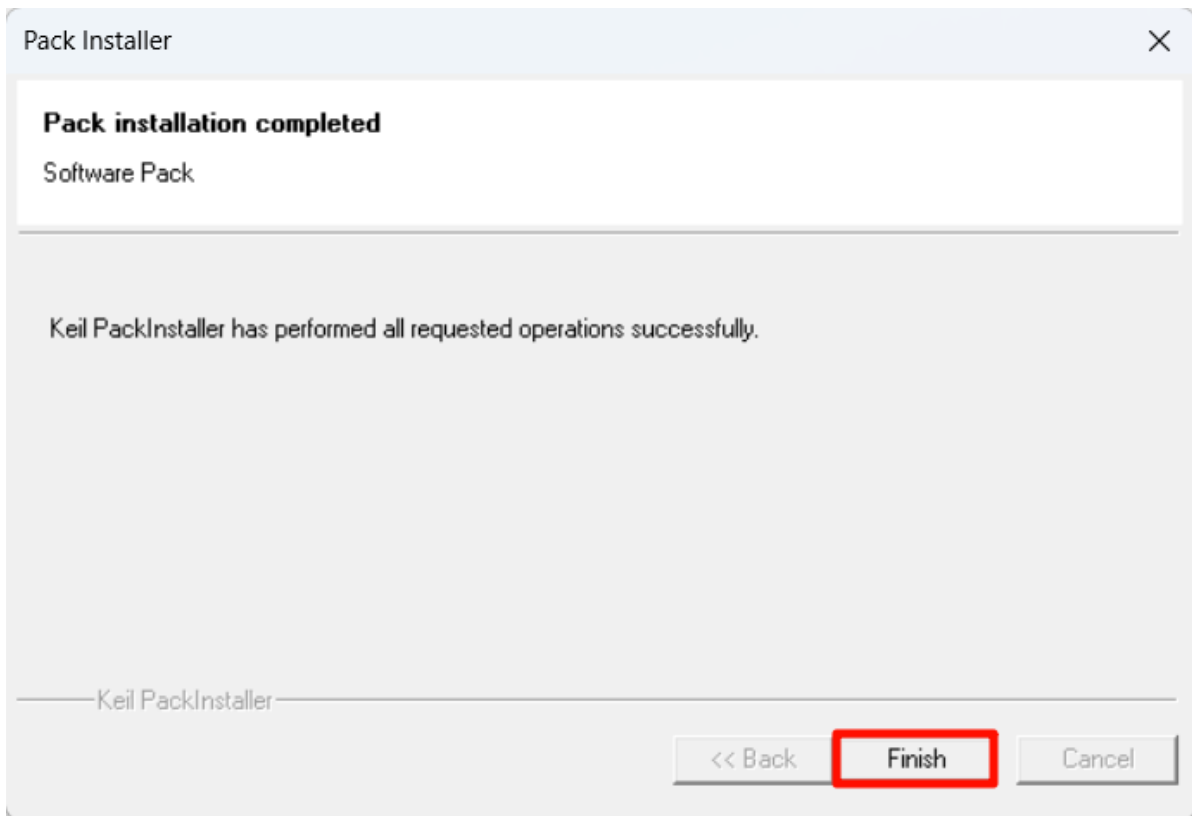

The appearance of `compiler version 5` indicates that the installation is successful!

Install the MSPM0G chip package

Double-click to open the `TexasInstruments.MSPM0G1X0X_G3X0X_DFP.1.3.1.pack` file to install the chip package:

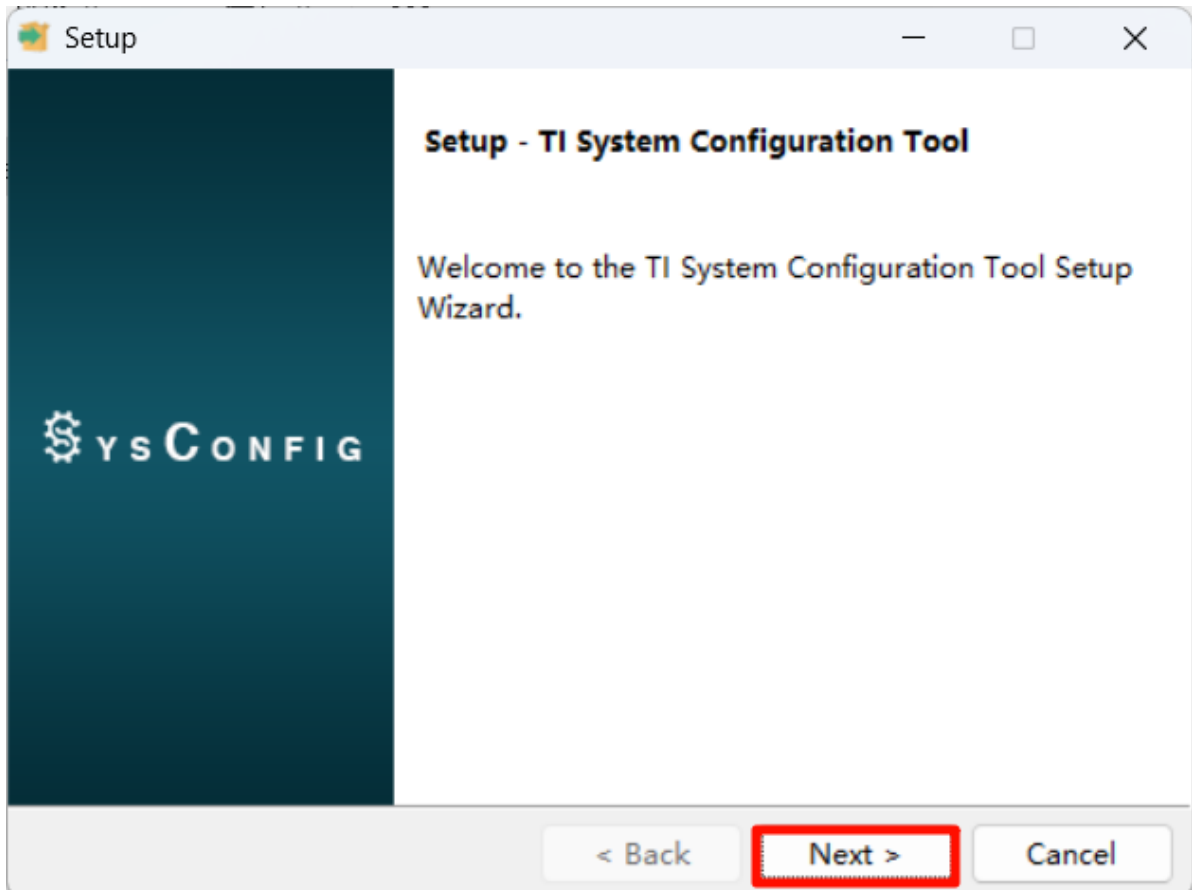

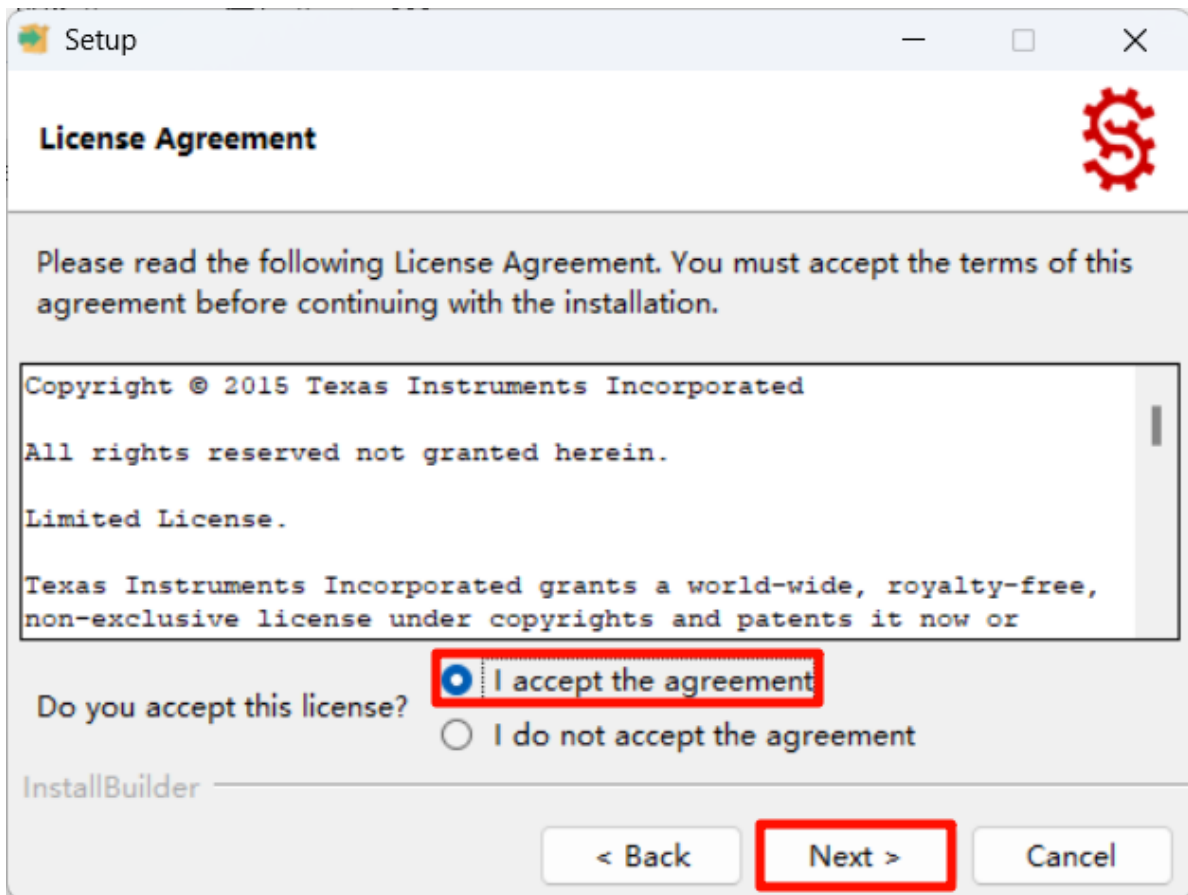

2. SysConfig installation

sysConfig is a configuration tool for TI microcontrollers and processors, designed to simplify hardware and software configuration for TI developers and accelerate software development!

Open `sysconfig-xxx-setup.exe` as an administrator and install according to the prompts:

Agree to the agreement

The screenshot shows a 'Setup' window titled 'License Agreement'. It contains a text area with the following text: 'Copyright © 2015 Texas Instruments Incorporated', 'All rights reserved not granted herein.', 'Limited License.', and 'Texas Instruments Incorporated grants a world-wide, royalty-free, non-exclusive license under copyrights and patents it now or'. Below the text area, there are two radio buttons. The first radio button is selected and is labeled 'I accept the agreement'. The second radio button is labeled 'I do not accept the agreement'. At the bottom of the window, there are three buttons: '< Back', 'Next >', and 'Cancel'. The 'Next >' button is highlighted with a red box.

Setup

Installation location

The recommended default location for the software is:

The screenshot shows a 'Setup' window titled 'Installation Directory'. It contains a text area with the following text: 'Please specify the directory where TI System Configuration Tool will be installed.' Below the text area, there is a text input field labeled 'Installation Directory' containing the text 'C:\ti\sysconfig_1.21.1'. To the right of the input field is a folder icon. At the bottom of the window, there are three buttons: '< Back', 'Next >', and 'Cancel'. The 'Next >' button is highlighted with a red box.

Setup

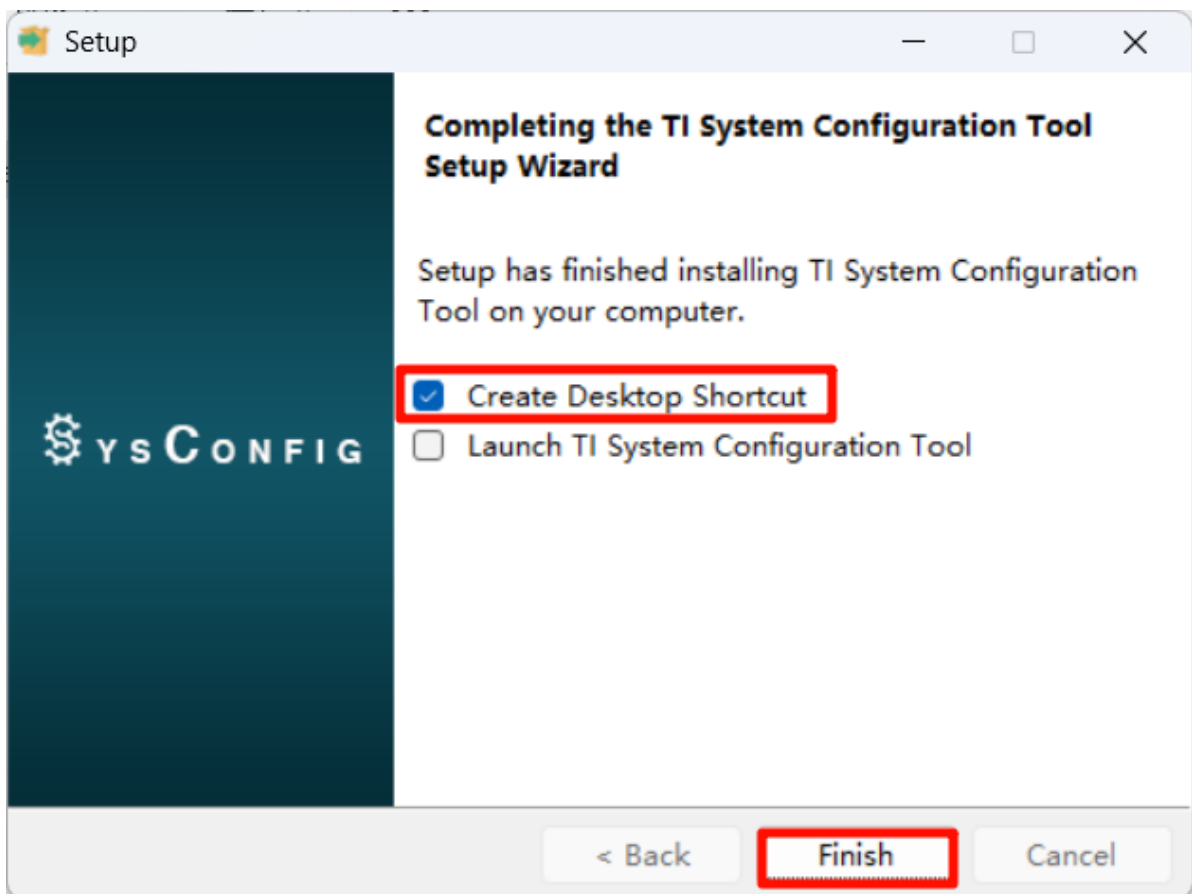

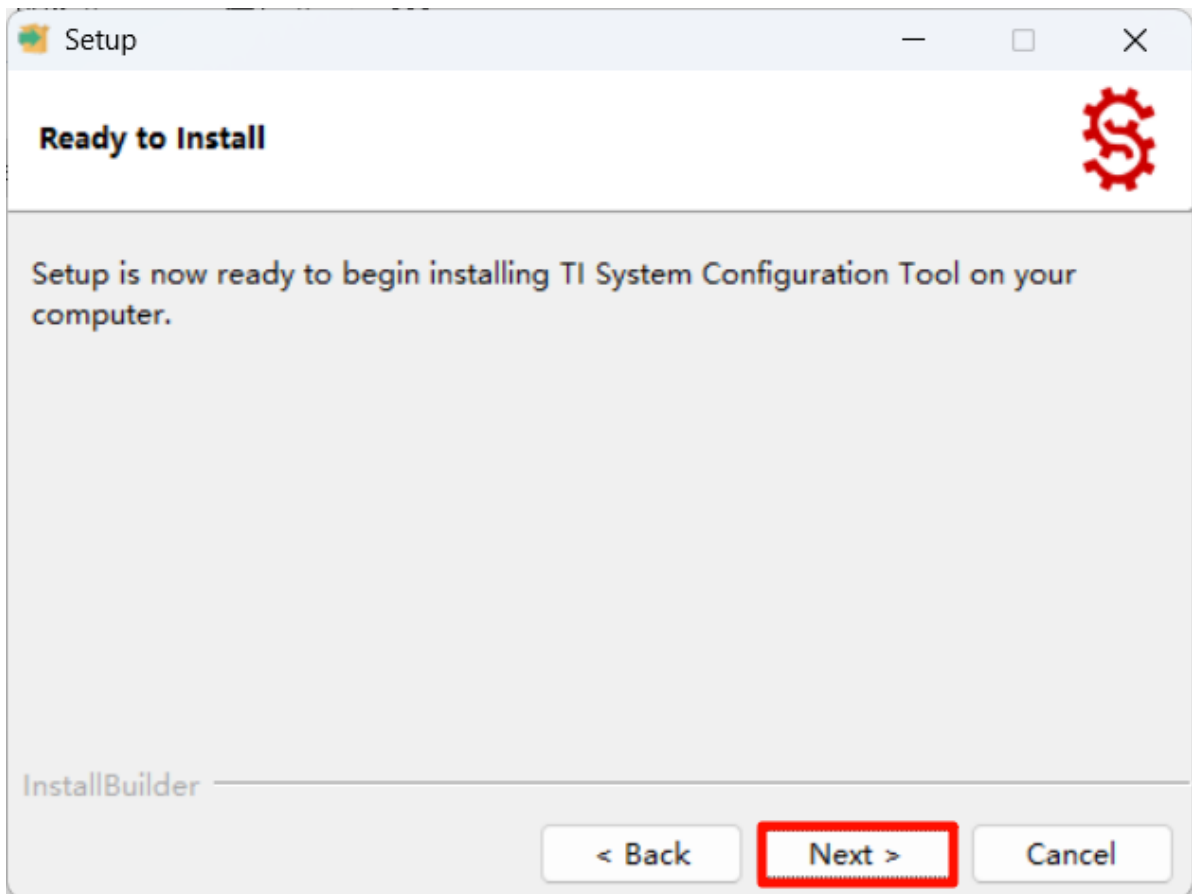

Installation Directory

Please specify the directory where TI System Configuration Tool will be installed.

Installation Directory C:\ti\sysconfig_1.21.1

3. Configure SysConfig for KEIL 5

Use the SysConfig tool on KEIL MDK-ARM.

syscfg.bat

Use Notepad to edit the `syscfg.bat` file, and then check whether `SYSCFG_PATH` is correct: ** Fill in the `sysconfig_cli.bat` file path in the SysConfig installation directory, pay attention to whether the version number and path are consistent! **

syscfg.bat file path: C:\ti\mspm0_sdk_2_02_00_05\tools\keil
sysconfig_cli.bat file path: C:\ti\sysconfig_1.21.1
If the user changes the default installation location of the software, he needs to find the syscfg.bat file under the MSPM0-SDK installation location and modify it

```
@echo off

set SYSCFG_PATH="C:\ti\sysconfig_1.21.1\sysconfig_cli.bat"

if not exist "%SYSCFG_PATH%" (
    echo.
    echo Couldn't find Sysconfig Tool %SYSCFG_PATH%
    echo "Update the file located at <sdk path>/tools/keil/syscfg.bat"
    echo.
    exit
)

echo Using Sysconfig Tool from %SYSCFG_PATH%
echo "Update the file located at <sdk path>/tools/keil/syscfg.bat to use a different version"

set PROJ_DIR=%~1
set PROJ_DIR=%PROJ_DIR:='%

set SYSCFG_FILE=%~2
set SYSCFG_FILE=%SYSCFG_FILE:='%

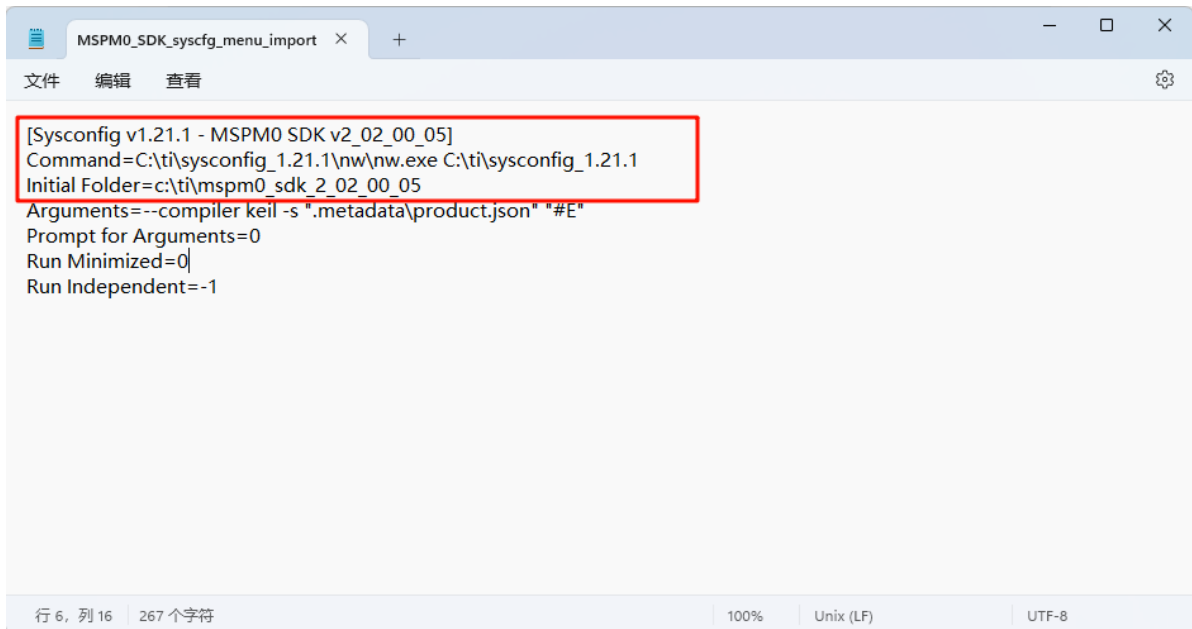

:: Search for the root of the SDK by going up one directory
:: However, if we don't find it after 20 times then give up
set SDK_ROOT=%PROJ_DIR%
set iter=0
: sdk_search_loop
if exist "%SDK_ROOT%\metadata\product.json" (
    goto sdk_search_exit
) else if %iter% geq 20 (
    goto sdk_search_exit
) else (
    set SDK_ROOT=%~1\..
    set iter=%iter%+1
    goto sdk_search_loop
)

:sdk_search_exit
echo %SDK_ROOT%

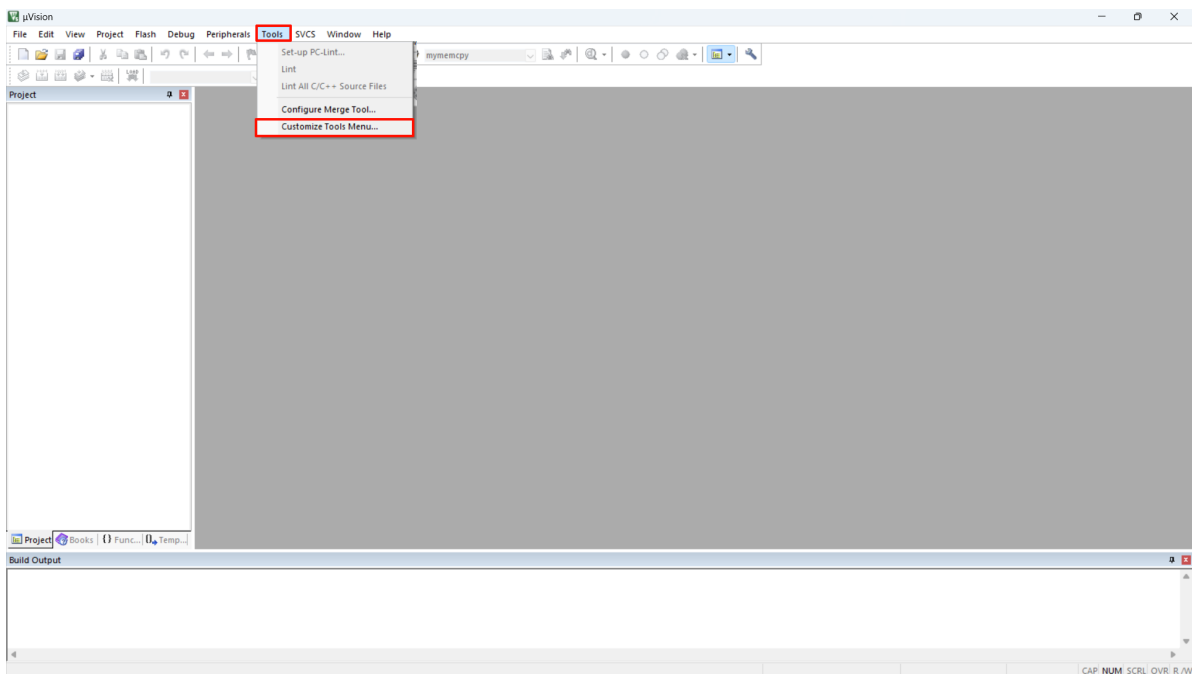

exit /b
```

MSPM0_SDK_syscfg_menu_import.cfg

Use Notepad to edit the `MSPM0_SDK_syscfg_menu_import.cfg` file, and then check if the path and version number are correct:

KEIL 5 Add SysConfig tool

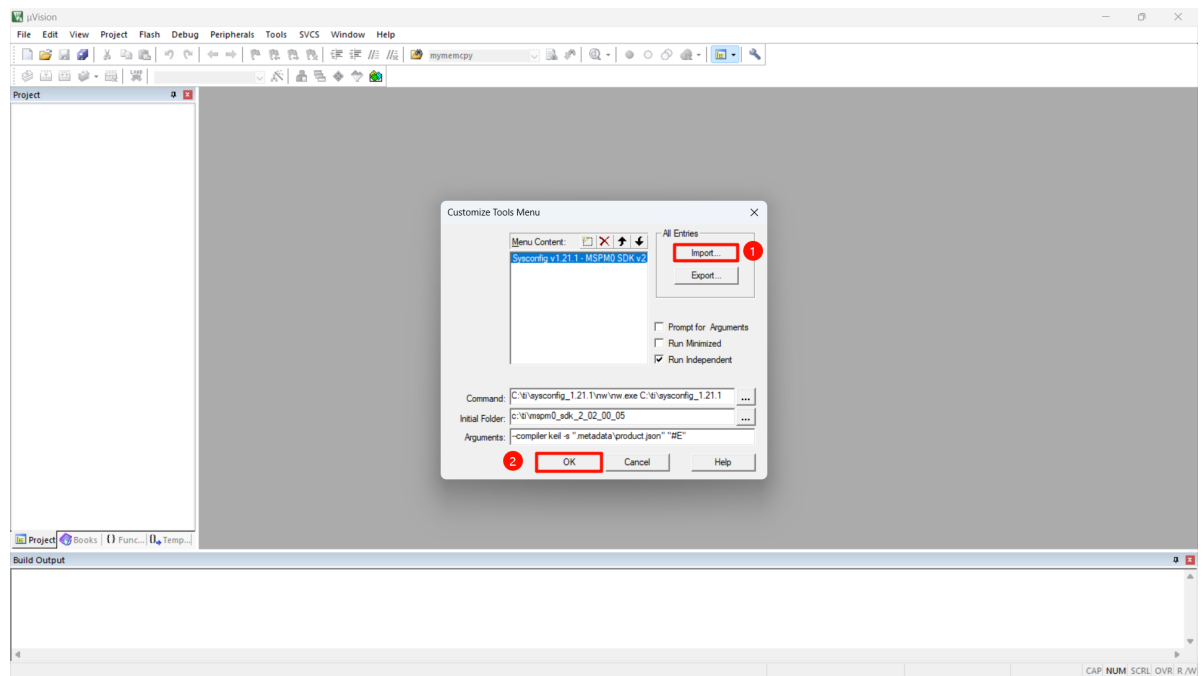

Find and open the `MSPM0_SDK_syscfg_menu_import.cfg` file:

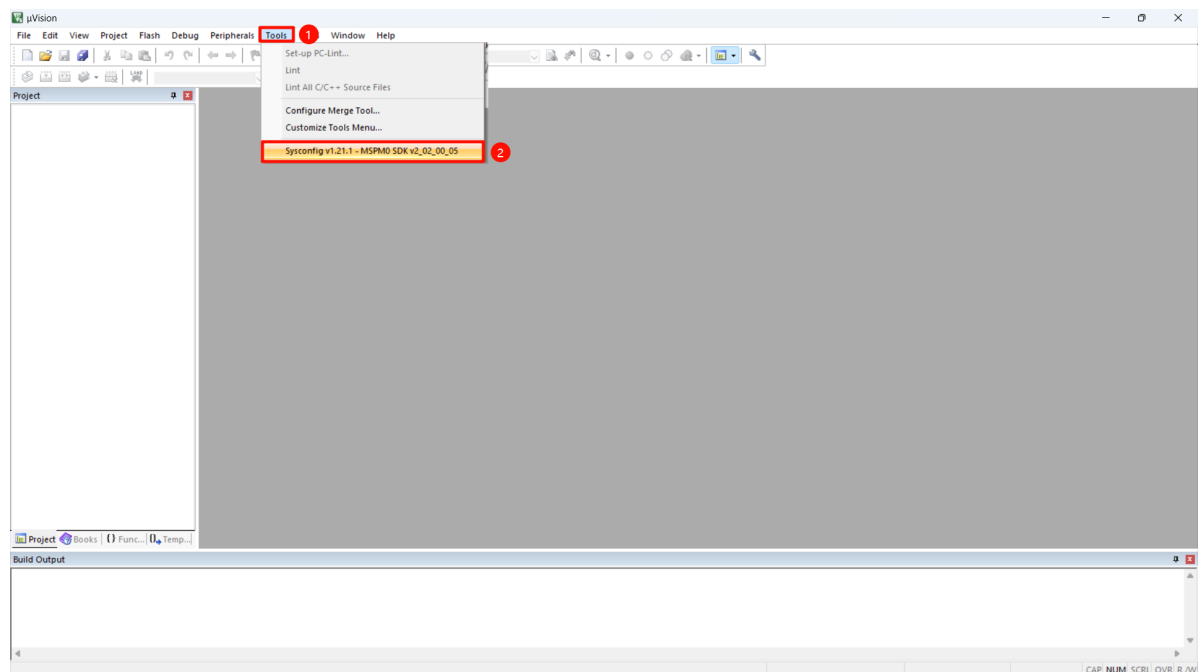

MSPM0_SDK_syscfg_menu_import.cfg file location:

C:\ti\mspm0_sdk_2_02_00_05\tools\keil

If the user changes the default installation location of the software, he needs to find the MSPM0_SDK_syscfg_menu_import.bat file under the MSPM0-SDK installation location

Use SysConfig tool

The following interface appears, indicating that the configuration is successful!

opening the SysConfig tool in the .cfg file of the TI project will not cause this prompt!
